FREE Drill Bit Included!

Blue Climaseal® coating is uniquely applied in multiple stages through dip-spin technology for extra corrosion resistance. Advanced Threadform Technology™ intertwines a large “chiseled” main thread with a small diameter thread to reduce head snapping and provide 30% lower installation torque and 20% more holding power. Close-to-edge placement. No expansion or outward pressure allows installation near a concrete’s edge without cracking. Patented Advance Threadform provides superior pull-out performance. Finished head gives a low, uniform profile and aesthetic appeal. Recommended for use with ACQ pressure-treated lumber. Application of coating adds extra corrosion protection. Easily reversible and removable. No inserts required. Reversible and removable. Building code approved. Made in the U.S.A.
