Screw Products Inc. Touts Safety, Quality with Featured Products at JLC Live
Booth 127 will Showcase 'Ultimate' fasteners, DeckLok, RailLok & Hidden Deck Clips

PROVIDENCE, R.I. – An array of products focused on safety and quality building practices will be on display at the Screw Products Inc. booth at JLC LIVE 2013 in Providence, R.I. March 20 through 23.

Jim Miller, president of [Screw Products Inc.](#), said his company's product line has expanded considerably in the last year, and each new product addition represents a specific improvement to extend longevity, increase ease of use, and provide solid, sturdy building solutions.

"Across the country, we're seeing a greater need for long-lasting building materials and accessories that professionals and homeowners alike can use," he said. "Everyday we see stories in the media of accidents caused by unsafe structures, such as collapsing decks or crumbling walls. Products that have been specifically designed to improve integrity, design, and overall quality are a direct answer to this need."

Screw Products Inc. will showcase its full line of quality fasteners, ranging in size from 1" to 16" and including Star Drive Screws for a myriad of interior and exterior uses, such as cabinetry and finishing, wood to steel jobs, composite decking, and heavy-duty use. Screw Products' booth (127) will also feature:

- **The DeckLok Deck Bracket System**, which creates stronger deck connections by redirecting the force of the load from "pullout" to a connection in "shear" at the deck floor joist. By adding DeckLok Deck Brackets to current construction methods, decks will meet or exceed IRC 2006 requirements.
- **RailLok**, used to connect railing sections to the rail post, built to outlast the service life of the railing, and available in 316 Stainless Steel and in white or black powder coat finish. Custom colors are available by request.
- **C-Deck Star Drive Composite Deck Screws** for interior and exterior use with wood, composite and other plastic materials. These fasteners are specially designed to eliminate the mushrooming and blemishes that can occur in composite materials and to pull down and hold warped lumber and lock the boards together when used with wood decks. C-Deck Star Drive Screws are now available in 17 colors.
- **The Ultimate Hidden Deck Clip (Patent Pending)**, the only hidden fastener that combines holding power with ease of installation. The Hidden Deck Clip is used when installing quality hardwood, soft wood, composite or synthetic decking of any kind. It requires no pre-drilling and uses Marine Grade Aluminum, a strong T20 Star Drive Black Oxide stainless-steel screw that holds the decking much tighter than plastic clips, and allows for the inevitable movement all deck materials experience.

JLC LIVE welcomes professional builders, remodelers and numerous other residential construction professionals to the Rhode Island Convention Center in downtown Providence each year. In 2012, the show recorded more than 7,000 attendees, marking a 5% increase over the previous year. The Conference will run March 20-23 and the Exhibit Hall will be open March 22-23. JLC LIVE is presented by the *Journal of Light Construction*, *Remodeling Magazine* and *Tools of the Trade*. For more information, please visit www.JLCLIVE.com.
